Projects

TaskPulse *Jun 2026 – Present*
Full Stack Developer Live Link

- Built a modular project and task management platform using Node.js, Express.js, MongoDB, and Redis with MVC architecture.
- Implemented JWT authentication, Google OAuth, RBAC, secure email invitations, and AWS S3 for secure application workflows and file storage.
- Integrated Socket.IO for real-time updates and deployed on Render; recorded **1.0s LCP and 0ms TBT**.

Alex Chat *2026 – Present*
Full Stack Developer Live Link

- Built an **LLM-powered student assistant** for lab-record generation and note summarization, supporting persistent and session-only conversation memory.
- Implemented a **RAG pipeline** for note summarization by chunking documents and storing embeddings in a **Supabase vector database** for context-aware retrieval.
- Integrated OpenRouter's Free Models Router to access **25 free model variants** through a unified API, avoiding direct coupling to a single model provider.
